The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forematics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1 MKVSAARLAVILIATALCAPASASPYSSDTTPCCFAYIARPLPRAHIKEYFYTSGKCSNP 60

```
chemokine mutant), comprising the amino sequence of 91 amino acids as given in the specification. The CC chemokine mutant RANTES, with two mutations in the cationic site is useful for the preparation of a pharmaceutical composition used in treating multiple sclerosis or other demyelinating diseases. The mutant with single mutations at cationic sites is used for the treatment of HIV infection and/or other allergic or inflammatory disease. This sequence represents the wild-type human RANTES protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 MKVSAAALAVILIATALCAPASASPYSSDTTPCCFAYIARPLPRAHIKEYFYTSGKCSNP 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to the treatment of paramyxovirus infection that involves administration of an active ingredient such as RANTES chemokine (I) or an expression system (II). (I) and (II) are used in the treatment and diagnosis of paramyxovirul infection, especially in children. RANTES chemokine has a significant effect on respiratory infections caused by paramyxovirus. RANTES acts downstream of vixal entry and signals through specific CCII and/or CCR5 chemokine receptors to interrupt the death pathway of macrophages which have been infected by virus. RANTES not only inhibits apoptosis of infected macrophage but also clears the macrophage of infection. The present sequence represents a human RANTES protein. Note: the present sequence is not provided in the specification. It has been obtained from the NCBI database under the accession no. NP_002976.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             RANTES, neuroprotective, antiallergic, antiinflammatory, anti-HIV, human, chemokine mutant, cationic site, multiple sclerosis, HIV infection, inflammatory disease, demyelinating disease, allergic; wild type.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 MKVSAARLAVILIATALCAPASASPYSSDTTPCCFAYIARPLPRAHIKEYFYTSGKCSNP 60

engineered for expression in a nucleic acid construct. The invention also discloses a method for identifying selenoprotein coding sequences, for detecting certain viruses (e.g. HIV or Ebola), cancer and immune system disorders. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             RANTES; neuroprotective; antiallergic; antiinflammatory; anti-HIV; human; chemokine mutant; cationic site; multiple sclerosis; HIV infection; inflammatory disease; demyelinating disease; allergic; mutein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         chemokine mutant), comprising the amino sequence of 91 amino acids as given in the specification. The CC chemokine mutant RANTES, with two mutations in the cationic site is useful for the preparation of a pharmaceutical composition used in treating multiple sclerosis or other demyelinating diseases. The mutant with single mutations at cationic sites is used for the treatment of HIV infection and/or other allergic or inflammatory diseases. This sequence represents a mutant human RANTES protein of the invention.
                                                                                                                                                                                                                                                                                                                                           60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a truncated and mutated human RANTES (a CC chemokine mutant), comprising the amino sequence of 91 amino acids as given in the specification. The CC chemokine mutant RANTES, with two mutations in the cationic site is useful for the preparation of a pharmaceutical composition used in treating multiple sclerosis or other demyelinating diseases. The mutant with single mutations at cationic sites is used for the treatment of MIV infection and/or other allergic or inflammatory diseases. This sequence represents a mutant human RANTES
                                                                                                                                                                                                                                                                                                                                RANTES; neuroprotective; antiallergic; antiinflammatory; anti-HIV; human; chemokine mutant; cationic site; multiple sclerosis; HIV infection; inflammatory disease; demyelinating disease; allergic; mutein.

The invention relates to a truncated and mutated human RANTES (a CC chemokine mutant), comprising the amino sequence of 91 amino acids as given in the specification. The CC chemokine mutant RANTES, with two mutations in the cationic site is useful for the preparation of a pharmaceutical composition used in treating multiple sclerosis or other demyelinating diseases. The mutant with single mutations at cationic sites is used for the treatment of HIV infection and/or other allergic or inflammatory diseases. This sequence represents a mutant human RANTES protein of the invention.
                                                                                                                                                                                                                                                                                                                                     RANTES; neuroprotective; antiallergic; antiinflammatory; anti-HIV; human; chemokine mutant; cationic site; multiple sclerosis; HIV infection; inflammatory disease; demyelinating disease; allergic; mutein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A mutant of the human CC chemokine RANTES with two mutations in the cationic site of the 40's loop is used for treatment of multiple sclerosis and/or demyelinating diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /note= "Wild-type Arg substituted by Ala"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT 12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 25, Application US/09230371A

Sequence 25, Application US/09230371A

Patent No. 634856

GENERAL INFORMATION:

APPLICANT: Chang, Yuan

APPLICANT: Russo, James J

APPLICANT: Moore, Patrick S

TITLE OF INVENTION: USES THEREOF

FILE REFERENCE: 45185-G-PCT-US

CURRENT APPLICATION NUMBER: US/09/230,371A

CURRENT APPLICATION NUMBER: PCT/US97/13346

PRIOR FILING DATE: 1997-07-22

Title: A family of small inducible proteins secreted by leukocytes are members of a ne
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Clore, G.M.; Lodi, P.J.; Garrett, D.S.; Gronenborn, A.M..

Dmitted to the Brookhaven Protein Data Bank, January 1994

Reference number: AS2206; PDB:HUM

Contents: annotation; conformation and disulfide bond assignments by (1)H-NMR, residue

Comment: This protein is secreted by activated lymphocytes and monocytes. It is bound
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ;Superfamily: macrophage inflammatory protein
